

# Highest Occurring Element in an Array

Given an array **nums** of  $n$  integers, find the most frequent element in it i.e., the element that occurs the maximum number of times. If there are multiple elements that appear a maximum number of times, find the smallest of them.

$[1, 2, 2, 3, 3, 3]$

$1 \rightarrow 1 \text{ time}$   
 $2 \rightarrow 2 \text{ times}$   
 $3 \rightarrow 3 \text{ times}$   
→ 3

Constraints:

- $1 \leq n \leq 10^5$
- $1 \leq \text{nums}[i] \leq 10^4$

$[4, 1, 4, 5, 2, 5, 6]$

→ 4  
 $4 \rightarrow 2 \text{ times}$   
 $5 \rightarrow 2 \text{ times}$

Brute Force ↴

$\text{maxCount} = 0$   
 $i = 0$   
 $\text{count} = 0$   
.

→ 3  
→ 4  
→ 5

$\text{Count} = 0$   
 $\text{vis}[] =$   
 $\begin{matrix} 0 & 1 & 2 & 3 & 4 & 5 & 6 & 7 \\ | & | & | & | & | & | & | & | \\ 0 & 0 & 0 & 1 & 0 & 2 & 0 & 1 \end{matrix}$   
1 1 1 1

int func (arr)

$$vis[i] = [10^4 + 1]$$

TC  $\Rightarrow O(n^2)$

SC  $\Rightarrow O(10^4)$

[1, 2, 3, 4, 5]

for ( $i \rightarrow n - 1$ )

$cnt = 0$

    if ( $vis[am[i]] == 0$ )

## 3005. Count Elements With Maximum Frequency

Easy Topics Companies Hint

You are given an array `nums` consisting of **positive** integers.

Return the **total frequencies** of elements in `nums` such that those elements all have the **maximum frequency**.

The **frequency** of an element is the number of occurrences of that element in the array.

**Example 1:**

**Input:** `nums = [1,2,2,3,1,4]`

**Output:** 4

**Explanation:** The elements 1 and 2 have a frequency of 2 which is the maximum frequency in the array.  
So the number of elements in the array with maximum frequency is 4.

**Example 2:**

**Input:** `nums = [1,2,3,4,5]`

**Output:** 5

**Explanation:** All elements of the array have a frequency of 1 which is the maximum.  
So the number of elements in the array with maximum frequency is 5.

$$\begin{array}{l} 1 \rightarrow 2 \\ 2 \rightarrow 2 \\ 3 \rightarrow 1 \\ 4 \rightarrow 1 \end{array}$$

2 & 2 → 4
